The Ocean Wake MKIV is designed to assist the pilot of a vessel to stay alert, while also providing a means of alerting the crew if the pilot has become incapacitated by other means .The Ocean Wake MKIV is powered from the ships dc electrical system and contains a built in back up power supply / charging circuit. The Ocean Wake MKIV can be interfaced with optional remote sirens, lights / strobes and reset stations.

# Ocean Wake MKIV Specifications

Dimensions 8" Wide X 4-1/4" High X 1-3/4" deep  
Cut out Dimensions 7-1/4" Wide X 3-1/2" High  
Voltage 8 – 40 vdc

- **Operation:** Insert the key, rotate clockwise to ON to begin timer, then back to LOCK and remove the key. The time in minutes remaining until the light begins flashing will be displayed above the MINUTES label. If no time is displayed, turn the DIMMER knob clockwise until you can see the time. To increase the alarm time by one-minute increments, insert the key and switch between LOCK and ON. The timer will go to 30 minutes then reset to one minute. At any time when the Alarm is running, it can be reset to the original start time by pressing the either the RESET or TEST buttons. When the programmed time has elapsed, the RESET button light will flash for 30 seconds. If the alarm is not reset in this time, a soft audible alarm will sound for 30 seconds. If the alarm is not reset in this time, the piercing alarm will sound until the system is reset.

## Optional Equipment

- Remote siren
- Remote indicator light / strobe
- Remote reset station
- Motion sensor
